Enterprise Resource Planning: Solutions and Management

Master's Thesis from the year 2006 in the subject Business economics - Business Management, Corporate Governance, grade: VG=Sehr gut, Gotland University (Baltic Sea Management Academy), course: International Management, 58 entries in the bibliography, language: English, abstract: The purpose of this research paper is to examine Enterprise Resource Planning systems (ERP) in terms of implementation, and the feasibility in general of ERP systems in companies which are located in Sweden and Russia. There will be an analysis in how far the company benefits from the implementation of ERP. An ERP system is a programme that combines the software of each department in a company into single software. It helps the company to work in a solid IT-environment where you can easily share information among departments. However, this Master's research is focusing on the managerial and economic perspectives instead of a technical examination. The research will be based on questionnaires, interviews as well as case studies in the above-mentioned countries. The study attempts to reveal the differences and similarities in the implementation process in a Russian (Mobile TeleSystems) and a Swedish (Telefonaktiebolaget LM Ericsson) company in terms of their various approaches within these countries.

Enterprise Resource Planning: Global Opportunities and Challenges

Management Accounting in Enterprise Resource Planning Systems
This research paper is exploring the impact of ERP on the effectiveness of business process management by evaluating ERP potential development on business processes and how ERP reaches for the maximum control and management of organizational structure and format of the business processes, which eventually leads to enhanced business process management.

Enterprise Resource Planning (ERP) is a software that consists of a group of applications to store, manage and use business information. ERP is a software system which is designed to cover all the key business processes. The functions range from accounting and finance to human resources, sales and distribution, and customer relationship management. ERP applications are designed to connect different departments within a single enterprise and integrate them into a single, coherent system which is connected to the company’s external partners and customers.

In addition, with the daily evolution of information technology, the ERP system has been progressing and extending its functionalities. Supply chain management is currently supported by ERP systems, including the procurement of materials, inventory management, production scheduling, and sales and marketing activities. ERP systems also support the processes of finance and accounting, sales and distribution, human resources, and others. This research paper will look into the impact of ERP on business processes and its implications for the internal audit function.

And therefore, Gosain, S. (2004) says that companies and their stakeholders many times strain to implement such practices. Vendors contend that the implementation of such best practices lowers the cost of configuring the software and results in improving the business practices of the company. This can simplify applications to assist companies to implement role-based ERP systems with ease. On the other hand, people or companies implementing role-based ERP systems can also realize the advantage and help you run your business more effectively, efficiently, and responsively. This guide is structured to support all the people involved in ERP implementation—from the CEO and others in the executive suite to the people doing the detailed implementation work in sales, marketing, manufacturing, purchasing, logistics, finance, and elsewhere. This book is not primarily about computers and software. Rather, its focus is on people—and how to provide them with superior decision-making processes for customer order fulfillment, supply chain management, financial planning, e-commerce, asset management, and more. This comprehensive guide can be used as a selective reference for those, like top management, who need only specific pieces of information, or as a virtual checklist for those who can use detailed guidance every step of the way.

The Enterprise Resource Planning Decade: Lessons Learned and Issues for the Future presents a collection of chapters written by leading researchers that critically analyze the development of enterprise resource planning (ERP) over the last decade. The book covers the challenges that arise from the implementation of ERP systems and the need to develop more robust methodologies for successful implementation.

The book starts with an introduction to the field of enterprise resource planning and the importance of understanding the historical context of its development. It then goes on to discuss the various approaches to implementing ERP systems and the key factors that influence the success or failure of these implementations. The book covers a range of case studies of successful and unsuccessful ERP implementations, providing valuable insights into the lessons learned from these experiences.

The book also discusses the role of IT professionals and management in the implementation of ERP systems and highlights the importance of aligning business processes with technology. It provides practical advice on how to overcome common implementation challenges, such as resistance to change, data integration issues, and the need for seamless integration with existing systems.

Overall, The Enterprise Resource Planning Decade is a valuable resource for anyone involved in the implementation or management of ERP systems. It offers a comprehensive overview of the field, covering both theoretical and practical aspects, and provides guidance on how to navigate the challenges of implementing these systems effectively.

As the author, I hope that the insights provided in this book will be useful to practitioners, researchers, and students alike. I encourage you to read the book and share your thoughts and experiences with others in the field. I believe that by working together, we can ensure that future generations have access to the most up-to-date and accurate information on the topic of enterprise resource planning.
